

Build the Future of Your Business with Improved Resiliency and Decision Velocity

Secure your data for the quantum era and create new value across your business with accelerated AI insights from IBM z16.

Quantum computing can revolutionize the IT landscape. But unfortunately, it can potentially become the ultimate threat.

Today, encryption protects data. Encryption scrambles data behind complex math structures that are difficult to solve.

With quantum mechanics, computing problems are solved more efficiently – even cracking the most robust encryption. This poses a huge security threat.

“Considering that the digital economy is estimated to be worth \$20.8 trillion by 2025, the repercussions could be staggering.”¹

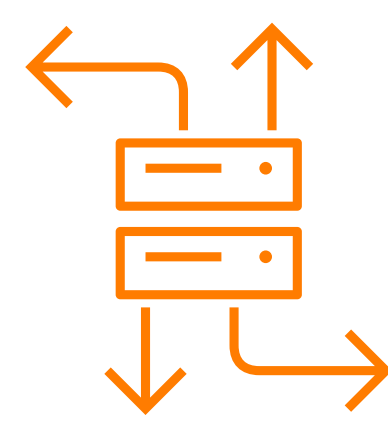

THE IBM Z16 PLATFORM: INNOVATION DESIGNED TO SECURE, MODERNIZE, AND TRANSFORM WITH DATA-DRIVEN INSIGHTS ACROSS YOUR HYBRID CLOUD

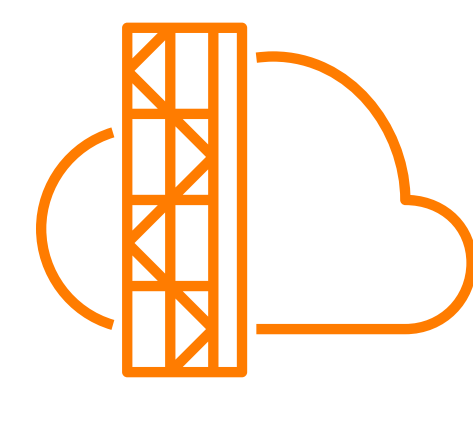

This quantum-safe system proactively protects against “harvest now, decrypt later” schemes on a single system that can process 25 billion secure transactions per day.

**INCREASE
DECISION-MAKING
VELOCITY**

**ENABLE
CYBER
RESILIENCY**

**UNLOCK
2.5 TIMES
MORE VALUE**

A strategic platform for clients, the IBM z16 supports critical business operations and secures highly sensitive data. It is an open, agile platform that integrates into your hybrid cloud environment with industry-leading security, data privacy and latency.

Protect today’s data against current and future cyberthreats with quantum-safe protection and accelerated AI insights.
