

# Optimize Security Incident Response with Enhanced Efficiency and Unified Data Insights

Make faster, more informed decisions to get ahead of security incidents with the IBM Security QRadar Suite.

Cyber threats have increased in frequency and complexity. Organizations are struggling to find the right tools to help them manage security incidents before they affect the bottom line.

“The global average cost of a data breach in 2023 was USD **\$4.45 million**, a 15% increase over 3 years.”

## Automate complex threat investigation processes with enterprise-grade AI capabilities

The IBM Security QRadar Suite provides full visibility of security data across devices and systems. Security data is automatically correlated using unique AI capabilities, giving security analysts the information they need for fast and efficient decision-making. Analysts can easily:

Create and prioritize cases based on severity risk score.

Examine a cross-siloed view of alerts and events on one, unified user interface.

Generate attack and network graphs.

Map MITRE ATT&CK tactics and techniques.

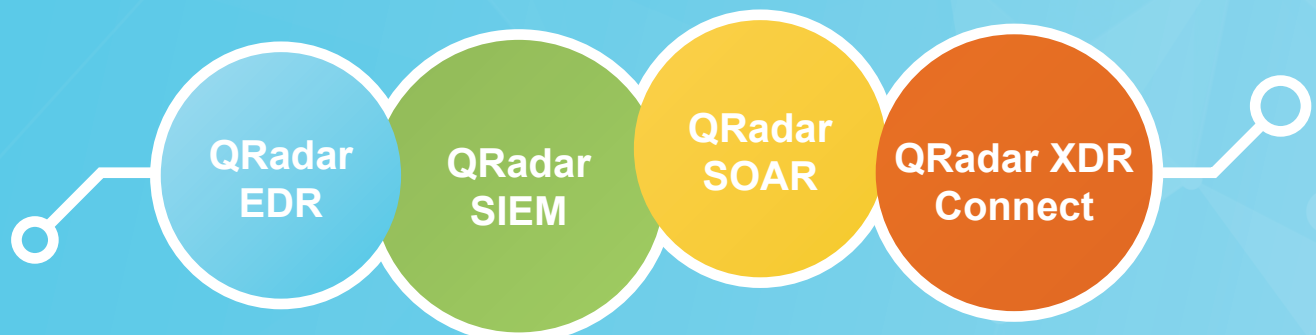

Review recommended responses.

**Empower analysts to respond to threats in minutes instead of hours or days.**

The IBM Security QRadar Suite leverages an open platform designed to integrate with tools from nearly any security vendor. The suite includes:

As a global leader in AI, automation, orchestration, and threat intelligence, IBM has designed the QRadar Suite with the core technologies needed in today's security operation centers.

Respond to security threats with *speed and accuracy* using advanced AI and automation designed for the modern threat landscape.

Learn more about how IBM Security QRadar Suite in a modern operations environment can enable business continuity and innovation.
