

Client Innovation Center and Integration Lab

Turn ideas into outcomes with a hands-on, real-world environment built for modern IT.

The Evolving Solutions Client Innovation Center and Integration Lab provides a dedicated space where our clients can validate strategies, test solutions, and accelerate decision-making before committing to production. It brings together infrastructure, software, cloud, and expertise to reduce risk and move initiatives forward with confidence.

Designed to support modern operations in hybrid cloud environments, the lab bridges the gap between planning and execution. Clients gain direct access to proven architectures, emerging technologies, and real-world scenarios that reflect their business requirements.

Designed for Real-World Outcomes

This environment is not just theoretical. It is built to replicate real-world working conditions so you can see how solutions perform before deployment.

- **Client Testing and Validation:** Validate architectures, configurations, and integrations in a controlled setting before moving to production.
- **Proof of Concepts (POCs):** Explore new capabilities and confirm business value through hands-on experimentation.
- **Integration and Customization:** Test how technologies work together across your

environment to ensure alignment and performance.

- **Staging and Readiness:** Prepare solutions for deployment with confidence through structured staging and validation processes.

A Strategic Investment in Client Success

Evolving Solutions has made a significant investment in the Client Innovation Center to provide access to enterprise-grade infrastructure and a broad set of technologies.

The lab environment includes modern compute, storage, security, and software platforms as well as access to multiple cloud providers that support a wide range of use cases, from data management and automation to AI and hybrid cloud operations.

This investment allows our clients to:

- Reduce deployment risk by testing in a real environment
- Accelerate time to value by validating decisions earlier
- Improve outcomes through iterative testing and refinement
- Align technology investments with business priorities

Where Strategy Meets Execution

Moving from planning to implementation can be difficult and expose real gaps. The Client Innovation Center and Integration Lab is designed to solve those challenges.

By combining consulting, engineering expertise, and a fully equipped lab environment, we help our clients:

- Translate strategy into actionable architectures
- Identify and resolve potential issues early
- Optimize performance, security, and cost before deployment
- Build confidence across technical and business stakeholders

Powered by Deep Technical Expertise

The lab is supported by experienced architects and engineers who guide clients through evaluation, testing, and optimization. Their

expertise spans enterprise infrastructure, networking, automation, security, and platform modernization.

This ensures that every engagement is grounded in practical experience and aligned to real business goals, not just technology adoption.

Why Evolving Solutions?

The Evolving Solutions Client Innovation Center and Integration Lab provides a better way to adopt new technology. Instead of making high-risk decisions in production, clients can validate, refine, and prove value in advance. The result is faster progress, lower risk, and more confident outcomes.

Ready to validate your next initiative before you commit?
